### **GEAA Calls for Moratorium on New Development on the Edwards Aquifer Recharge Zone**

As we near the 20<sup>th</sup> anniversary of San Antonio's water quality ordinances, we still see new development on the Edwards Aquifer Recharge Zone grandfathered from complying with those ordinances. San Antonio Water System (SAWS) continues to contribute to high density development by providing water and sewer service to grandfathered and other inappropriate developments on the Edwards Aquifer Recharge Zone. The fifteen local member groups of the Greater Edwards Aquifer Alliance call on the City of San Antonio and SAWS to issue a moratorium on utility service agreements and approval of new development on the Edwards Aquifer Recharge Zone, Transition Zone, and five miles into the contiguous Contributing Zone until such time as an effective plan to regulate growth over these areas is implemented.

**When: Monday, July 21<sup>st</sup> at Noon**

**Where: the Parking Lot of SAWS Headquarters (2800 U.S. Hwy 281 North)**

The fifty member groups of the Greater Edwards Aquifer Alliance (GEAA) are unanimous in regarding current rules as insufficient to adequately protect and maintain the high quality of our Edwards Aquifer water supplies. Water Quality monitoring reflects low levels of chlorinated solvents, unmetabolized drugs, and other constituents that should not be present if the current rules were adequately protecting the aquifer.

GEAA's recommendations include requiring adequate buffer zones to protect streams, springs and recharge features, limiting impervious cover to 15% on the Edwards Recharge, Transition, and contiguous Contributing zones, establishing rules for protecting the Contributing Zone, expanding the pollution reduction standards to include toxic metals, organic chemicals and nutrients, prohibiting discharge of treated effluent into waterways that recharge the Edwards, prohibiting installation of sewage infrastructure in creek beds of intermittent streams that recharge the Edwards, more effective rules for the design and installation of engineered structures required to protect the aquifer, and other measures and strategies that we believe are needed to protect our water quality.

GEAA has stated opposition to the Vista Ridge water supply project if these additional supplies are to be used to expand service into new areas of the Edwards Aquifer watershed. SAWS is recommending that the City of San Antonio annex all areas within the current extraterritorial jurisdiction, which would vastly increase high density development on the Recharge and Contributing zones under current City regulations. We urge the City and the SAWS Board to devise and adopt policies and regulations that will adequately protect this irreplaceable groundwater resource before entering into any agreements to purchase additional water supplies from the Vista Ridge Consortium.

xxx

The Greater Edwards Aquifer Alliance unites fifty member organizations behind a comprehensive plan to protect regional karst aquifers, their springs and watersheds, and the Texas Hill Country.
